Introduction

- Research Function of IOSCO working on emerging risks (SCRR; Research Department)
- Work Plan:
 - Risk Outlook
 - Risk Identification Methodology
 - Risk Dashboard
 - Risk Roundtables
 - Risk Surveys
 - Market Intelligence
 - Consultation of IOSCO Committees

Agenda

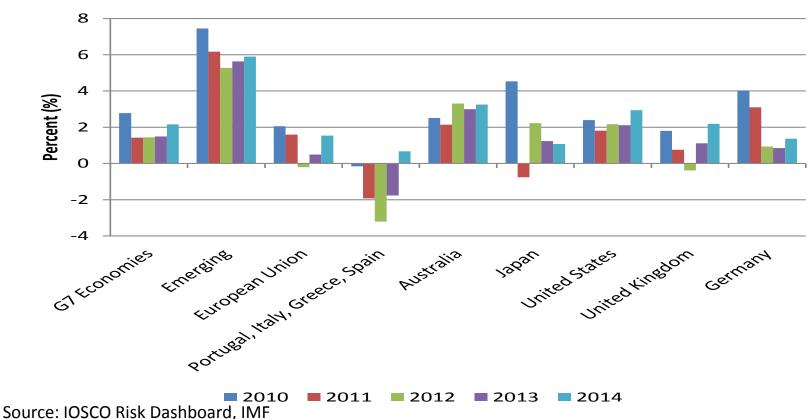

- Introduction
- Risks

- Low interest rate environment
- Collateral in a stressed funding environment
- Derivatives markets
- Cyber-crime

- Low interest rate environment
- Collateral in a stressed funding environment
- Derivatives markets
- Cyber-crime

Economic recession is deep in various parts of the Eurozone but recovery expected in 2014.

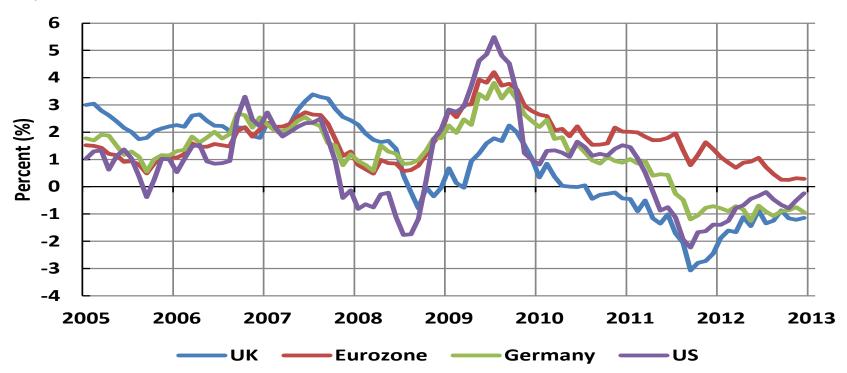

9

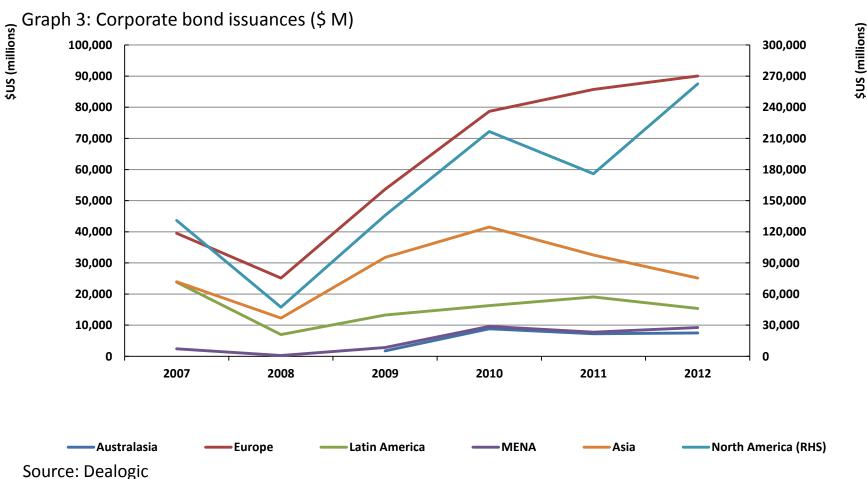

Expansionary monetary policies reduce real interest rates to maintain the functioning of the financial markets and to combat the recession

Graph 2: Real interest rates (%)

 Cheap borrowing for big firms (not SME's) drive corporate bond issuances up...

11

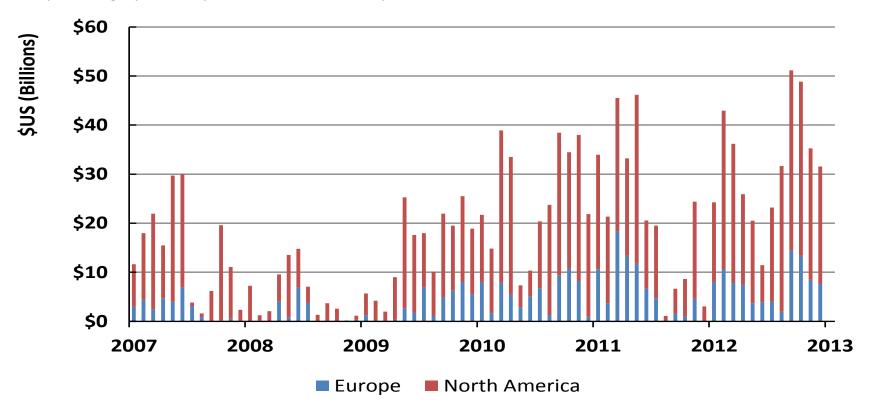

While IPOs on the equity markets seems less attractive for firm's funding...

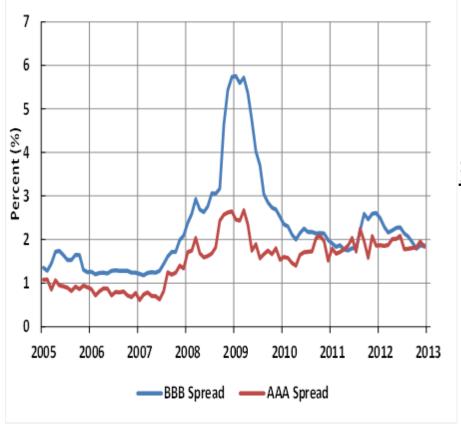

Source: World Federation of Exchanges

 Certain segments of bond markets show high volumes of issuance, especially high yield in the US – EU shows moderate levels...

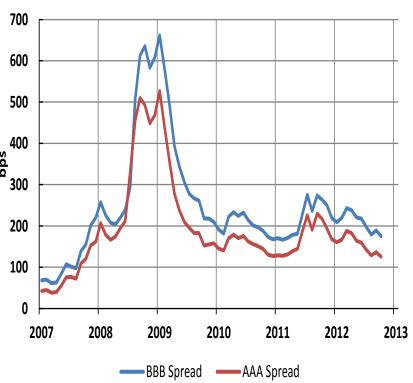

Graph 5: High yield corporate bond issuance per month (\$ bn)

Graph 6A .Private sector spreads over 10yr Government treasuries (percentage points), US

Graph 6B. Private sector spreads over generic Iboxx 10yr yields (percentage points), Euro area

Trends:

- High yield bonds sold through collective investment schemes and retail structured products/exchange traded funds and products (ETF, ETP).
- In certain European countries search for yield goes into real estate and real estate funds (e.g. Germany, Nordic countries, Switzerland).

Some questions about the risks:

- Do investors know the risks?
- What if interest rates go up or stay low for a very long period?
- Could there be problems of investors being locked in?

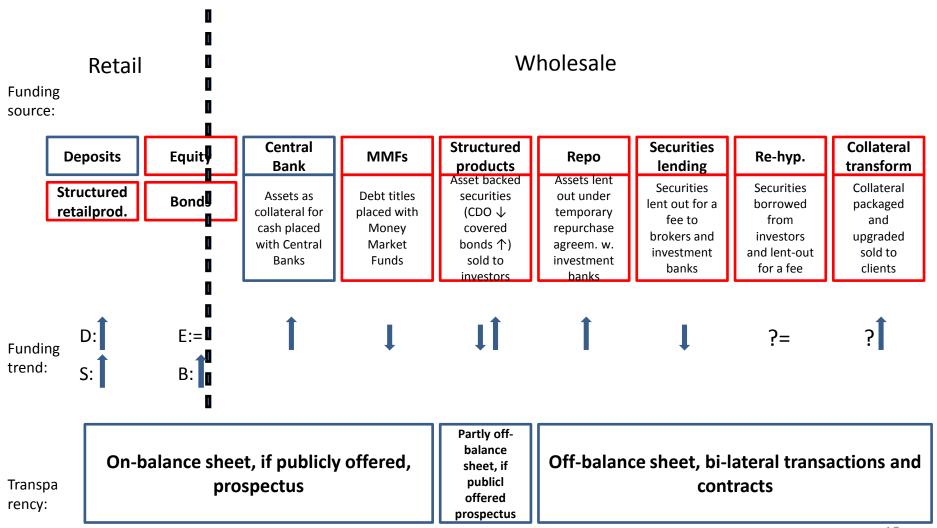

And a question about an opportunity for the stimulation of financial stability/global economy:

— What are the ideas for the inclusion of SME's?

- Low interest rate environment
- Collateral in a stressed funding environment
- Derivatives markets
- Cyber-crime

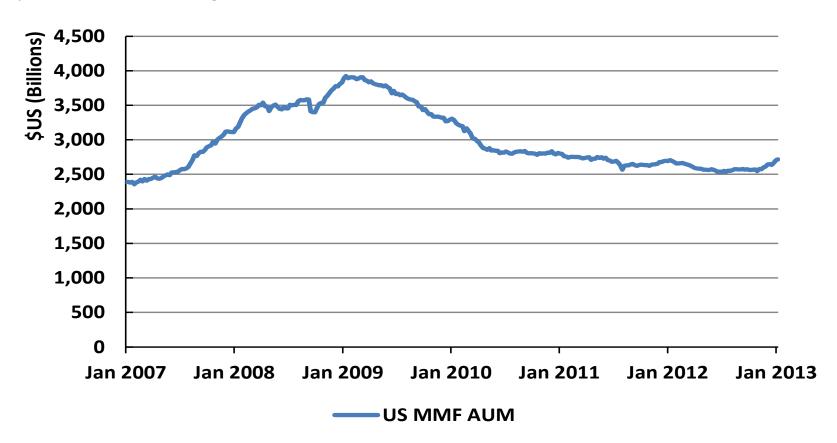

Trends:

- Available high quality <u>collateral has shrunk</u> from \$ 10 trillion in 2007 to \$ 6 trillion in recent years (IMF)
- Shift from <u>unsecured to secured financing</u> as confidence has dropped
- Funding environment <u>changed by regulation</u>:
 - Basel capital rules (huge impact on collateral)
 - MMF rules (e.g. shortened maturities)
 - Margin requirements OTC derivatives (expected huge impact on collateral)
 - Rules on structured finance products
- Collateral squeeze...

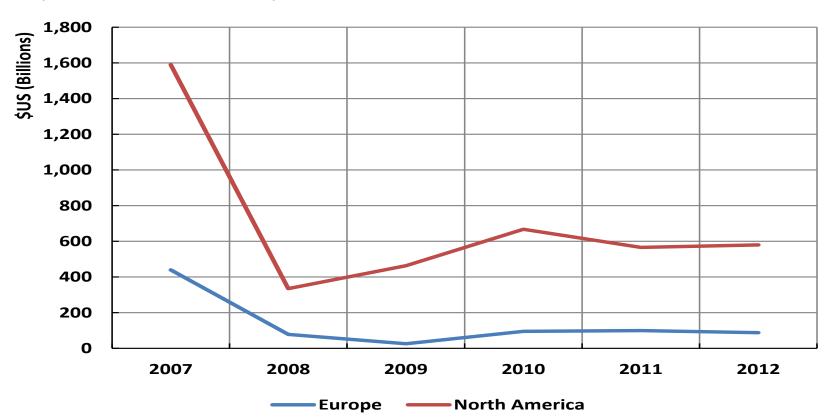

MMFs AUM is back at pre-crisis levels after huge outflows

Graph 7: Asset under management of US MMFs (\$ bn)

• Issuance of structured products (ex. covered bonds) has fallen...

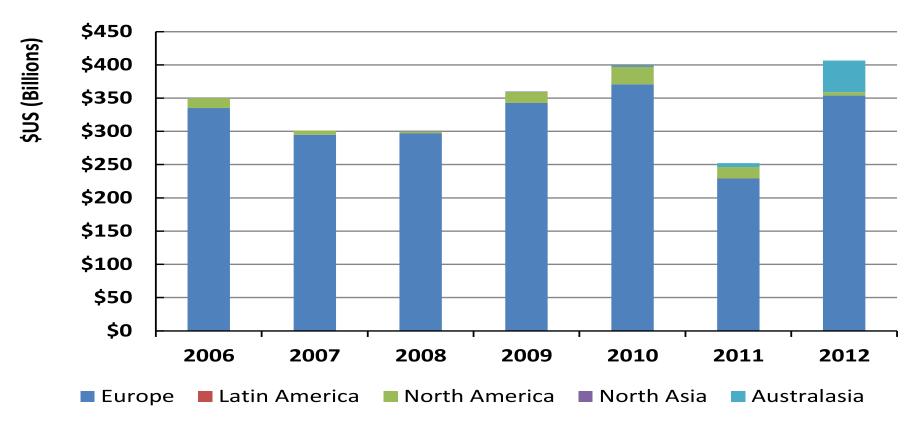

Graph 8: Issuance of structured products in EU and US (\$ bn)

Source: IOSCO Risk Dashboard, Dealogic

• Issuance of covered bonds has grown from 2007 to 2012, and is a merely European funding vehicle...

Graph 9: Issuance of covered bond (\$ bn)

21

	before crisis	<u>now</u>
Collateral	\$ 10 trillion	\$6 trillion
Money Market Funds (US)	\$ 2.5 trillion	\$ 2.7 trillion
Structured products (US)	\$ 1.6 trillion	\$ 600 billion
Structured products (EU)	\$ 420 billion	\$ 100 billion
Covered bonds	\$ 300 billion	\$ 400 billion
Securities lending	\$ 1.7 trillion	\$1 trillion
Triparty repo (US)	\$ 2.5 trillion	\$2 trillion
Repo market (EU)	€4.6 trillion	€6.2 trillion
Collateral transformation	?	?
G7 GDP	\$ 32.4 trillion	\$35.7 trillion
Source: IOSCO RD, IMF, M. Singh (2013), De		

- Collateral transformation is a new service and we don't know exactly what it is, nor how big it is...
- We know that it is off-balance sheet
- Just as certain structured products, repo, securities lending and re-hypothecation

Some questions about the risks:

- Is there (implicit) leverage being created by banks?
- Are risks being hide or shifted out of the regulator's sight?
- How long are the collateral chains?
- Where do the risks pool?
- How big are the interdependencies with CCPs?

- Low interest rate environment
- Collateral in a stressed funding environment
- Derivatives markets
- Cyber-crime

Derivatives markets

CCPs concentrate risks and provide transparency. Last years' CCP usage increased considerably.

Table 2: Notional volumes of selected CCPs around the globe 2011 - 2012

ССР	Region	Product	Dec-11 (\$US, billions)	Dec12 (\$US, billions)	% Chg
CME	US	IRS	\$114	\$1,300	1040%
SGX	ASIA	IRS	\$184	\$251	36%
LCH	EU	IRS	\$283	\$339	20%
Japan SCC	Asia	IRS	-	\$1,280	n/a
CME	US	CDX	\$15	\$98	553%
LCH	EU	CDS & ITRAXX	\$68	\$135	99%
ICE	US	CDS & CDX	\$12,000	\$21,000	72%
ICE	EU	CDS & ITRAXX	\$8,000	\$12,000	40%
Japan SCC	Asia	CDS	-	\$3,300	n/a
CLS	Global	FX	\$4,380*	\$4,610	5%
LCH	EU	FX	-	\$115	n/a

Source: CME, Singapore Stock Exchange, LCH Clearnet, ICE, CLS, SCC, the OT Cspace; compiled by IOSCO Research Notes: * Data as at Jan 2012:

Derivatives markets

Issues:

- Collateral absorbed by CCPs. Further squeeze?
- CCPs following similar risk management model amplification?
- CCPs accepting lower quality collateral race to the bottom?
- CCPs becoming active derivatives shops?
- Enhanced interconnection with banks more concentrated risk?
- What is the resilience of the system:
 - In the case of a huge margin call?
 - In the case a big trader/bank fails?
- Where are the weak spots in the network?

- Low interest rate environment
- Collateral in a stressed funding environment
- Derivatives markets
- Cyber-crime

Cyber crime

Issues:

- Financial system relies on technological infrastructure.
- Nature of cyber-crime is changing more sophisticated.
- Methods, motives, purposes and consequences not clear.
- Attack: not an 'if' but a 'when' question.

Questions:

- Systemic impact?
- How vulnerable are financial market infrastructures?
- Awareness is growing, but are regulators prepared?
