Crowdfunding
2015 SURVEY RESPONSES REPORT

THE BOARD OF
THE INTERNATIONAL ORGANIZATION OF SECURITIES COMMISSIONS

FR29/2015

December 2015
EXECUTIVE SUMMARY

1. Introduction
The IOSCO Committee for the Regulation of Market Intermediaries (Committee 3 or C3) has carried out a fact-finding survey to accomplish two goals – first, to enhance IOSCO’s understanding of developments in members’ current or proposed investment-based crowdfunding regulatory programs and second, to highlight emerging trends and issues in this area. This Report provides a summary of the responses from the survey.

2. Responses
Jurisdictions surveyed reported a variety of approaches to regulate crowdfunding. Among other things, some jurisdictions apply their general securities regulatory framework, which often allows the use of certain built-in flexibilities, while others have either introduced (or have proposed to introduce) ad hoc regulatory crowdfunding regimes. While these measures are quite diverse and tailored to specific regulatory and market concerns in the respective jurisdictions, some high level similarities appear present.

One major commonality is the objective of achieving a balance between risks/investor protection related concerns and the positive role securities markets can play in supporting economic recovery and growth through the promotion of crowdfunding. It is clear, however, that the particular way this balance is shaped varies from one jurisdiction to another.

Among the regulatory measures to foster crowdfunding, the review demonstrated that most jurisdictions that have introduced (or have proposed to introduce) ad hoc regulatory crowdfunding regimes require:

- Lighter entry requirements and, less frequently, special conduct of business provisions for the funding portals; and
- Limited reporting requirements for issuers.

These flexibilities are usually counterbalanced by a number of focused restrictions or tailored rules meant to ensure integrity of information and protect investors. For instance, less onerous provisions on funding portals are usually counterbalanced by:

- A number of limitations on the services and activities the portal is permitted to perform;
- The duty to appoint a third party custodian to hold an investor’s assets;
- Limitations to an investor’s ability to access funding portals; and
- Imposing risk acknowledgement and investor education regimes.

Another commonality that emerged from the review is that restrictions may apply to cross-border crowdfunding fundraising. For instance, special crowdfunding regimes often provide that the issuer and/or the managers running the funding portal must be incorporated locally.
More broadly, jurisdictions employ a number of regulatory measures designed to address the major risks considered with crowdfunding:

❖ Risk of default and high failures of start-up businesses

Many members require funding portals / intermediaries to conduct some due diligence on the issuer and/or the crowdfunding offerings. This may consist of, for instance:

- Conducting a mandatory review of issuers’ business plans to ensure that the issuers have genuine business ideas;
- Disclosing the criteria used in the project selection process; and
- Reporting to the regulator successfully completed offerings.

Another way members have designed measures to address this risk is that access to the funding portal maybe denied if:

- There is a reasonable basis to believe that an issuer is subject to a disqualification; or
- Professional investors do not undersign a percentage of the offer.

Also, a common mechanism adopted by many jurisdictions designed or proposed to be designed to protect investors against risk of default is to place a limit on investment amounts.

❖ Platform failure

Some respondents impose specific requirements on intermediaries to:

- Ensure the integrity of the information received and published through the funding portals;
- Establish proper IT systems and back-up facilities;
- Have sound procedures to ensure that in case of activity cessation, they continue to provide all or part of the services they committed to provide.

❖ Fraud and money laundering/terrorist financing

As a general rule, the responding jurisdictions address these risks by applying the same regulatory provisions on fraud and money laundering/terrorist financing generally applicable in the securities sector. Furthermore, steps such as conducting due diligence of the issuer and/or the offer and the appointment of third party custodians are also meant to reduce the risk of fraud.

❖ Lack of liquidity

To address liquidity risks, most jurisdictions impose specific disclosure requirements tailored to crowdfunding offerings. These requirements include, for instance, mandating publication -- on the funding portal -- of offering documents prepared in accordance with specific content and form prescribed by the regulator, even where the offering would trigger application of an exemption to the general prospectus publication requirements.
In some cases, the offering documents must be drafted in a concise and clear manner to allow comparison across the various offers on the portal.

Such offering documents include specific information on the liquidity risks and the absence of a secondary market, as well as other risks. In addition, investors are often given prominent risk warnings that must be acknowledged, including information on liquidity risks.

One jurisdiction introduced special retail investor rights, including tag-along rights allowing retail investors to withdraw from the offer or sell his/her stake in the event of a change in the control within three years the closure of the offering.

- Information asymmetry and investor inexperience

Special provisions dealing with these risks include requirements to ensure that investors have reviewed education materials or have completed a questionnaire demonstrating understanding of the essential features and main risks of the crowdfunding offer.

In some cases access to crowdfunding funding portals is restricted to investors who have been previously informed through warnings on the risks associated with investing in non-listed companies and have passed dedicated investor education interviews.

3. Main conclusions

The survey responses reveal that, despite certain commonalities and divergences in various jurisdictions, and the potential risks and positive rewards, crowdfunding regimes are in their infancy (or have not yet been launched) in most jurisdictions surveyed. Accordingly, this Report does not propose a common international approach to the oversight or supervision of on-going or proposed programs. As this new sphere of activity continues to develop, IOSCO may consider whether it is appropriate to evaluate the effects of the different approaches and may assess whether any further work is needed.

APPENDIX A: LIST OF RESPONDENTS ...........................................................................................................................29
APPENDIX B: SUMMARY OF RESPONSES TO IOSCO C3 INVESTMENT-BASED CROWDFUNDING
SURVEY OF RESPONSES TO IOSCO C3 INVESTMENT-BASED CROWDFUNDING SURVEY .................................30
I. BACKGROUND

The 2008 financial crisis resulted in a number of bank failures and, consequently, the implementation of new capital adequacy regulations for banks, such as Basel III. As a result, credit providers have become increasingly constrained in their ability to make loans available to worthy investment projects, particularly with respect to small and medium enterprises. To help address this problem, many jurisdictions have sought ways to expand equity investment in small firms and start-ups, which are often unable to raise capital through existing securities issuances, to stimulate growth and increase employment. One of these ways has been through the use of equity crowdfunding, which seeks to use technology, among other things, as an alternative way to raise capital\(^1\).

Because crowdfunding is a new and developing area, particularly in the retail markets, in 2014, the IOSCO Research Department developed a Staff Working Paper “Crowdfunding: An Infant Industry Growing Fast,” (“IOSCO Staff Working Paper”), which provided economic analysis in this area and considered possible regulatory implications for this type of capital fundraising\(^2\).

As the IOSCO Staff Working Paper found, crowdfunding platforms may adopt diverse business models, which depend on local regulatory regimes, as well as the legal structures by which the platforms organize themselves. Some jurisdictions see crowdfunding as an innovative way to facilitate funding for small and medium sized enterprises and seed capital to start-up companies, with a goal of promoting economic growth. In addition, other benefits of crowdfunding may include such things as:

- Lower cost of capital/high returns;
- Portfolio diversification;
- Cost efficiency of relatively simple infrastructure;
- Convenience of online platform; and
- Increased competition in a space traditionally dominated by a few providers.

At the same time, however, the IOSCO Staff Working Paper recognized that there may be a number of risks for investors\(^3\) with crowdfunding schemes, including:

---

\(^1\) An IOSCO Staff Working Paper discussed below states that “Crowd-funding is an umbrella term describing the use of small amounts of money, obtained from a large number of individuals or organizations, in order to raise funds for a project, business/personal loan or other financing needs through online web based platforms. Peer-to-peer lending is a form of crowd-funding used to fund loans, which are paid back with interest. Equity crowd-funding is the raising of capital through the issuance of stock to a number of individual investors using the same method as crowd-funding.”

\(^3\) In the EU the European Commission published a guide on risks on project owners as well: http://ec.europa.eu/growth/tools-databases/crowdfunding-guide/what-is/risks/index_en.htm
• Lending default and high failures of start-up businesses;
• Platform failure;
• Fraud and money laundering/terrorist financing;
• Lack of liquidity (i.e., the absence of secondary market/exit strategy)
• Information asymmetry; and
• Investor inexperience and lack of due diligence.

While this Report does not address the relative benefits or risks of crowdfunding, it recognizes that a number of jurisdictions have either implemented or proposed crowdfunding regimes. As a result, in an effort to better understand these initiatives, IOSCO’s Regulation of Market Intermediaries Committee 3 (C3) carried out a fact-finding survey on members’ current or proposed crowdfunding programs in summer 2014. Because crowdfunding appears to raise questions on virtually all aspects of securities markets regulation, the survey requested information in the following eight areas:

1. **Crowdfunding activities covered by current or proposed securities regulation:** equity, collective investment schemes, bonds, convertibles (sometimes referred to as “Investment-based Crowdfunding”), peer-to-peer lending\(^4\) or some form of it.

2. **Market intermediaries/Portals:** registration requirements, permissions and prohibitions, business conduct rules (e.g., customer due diligence, suitability, marketing/promotion), procedures for dealing with platform/intermediary failure, risk of fraud, availability of communication channels, handling of customers’ funds and assets, liability attached to different parties (e.g., which party has the obligation to conduct due diligence on the issuer, liability for disclosures made to investors), reporting obligations, cooling-off requirements, dispute resolution.

3. **Equity/Debt Issuers:** issuer’s qualifications (e.g. size/type of companies), limits on offering size, offering parameters, limits on securities, risk of default.

4. **Investors:** Investor protection, eligibility of investors (e.g. sophisticated investors only), restrictions regarding number of investors and maximum amount of investment, experience, education.

5. **Disclosure:** point of sale and on-going disclosure, prospectus requirements (e.g., type of information to be included, exemption from prospectus requirements), and liability attached to materials.

6. **Possible cross-border implications**, if any.

7. **Mitigation of emerging risks:** cyber risk, interconnectedness, etc.

8. **Other aspects:** costs and benefits.

This Report describes current and proposed regulatory initiatives in the area of Investment-based Crowdfunding activities. The summary not only enhances IOSCO’s understanding of current developments in crowdfunding regulation, but it also illuminates emerging trends and issues.

---

\(^4\) In line with the definition provided in the IOSOC Staff Working Paper in Note 1 above, in this Report peer-to-peer lending means the use of an online platform that matches lenders/investors with borrowers/issuers in order to provide unsecured loans.
II. KEY SURVEY RESPONSES

A. Overview of Regulatory Approaches to Crowdfunding

Twenty-three IOSCO members participated in this survey. As discussed below, the results show a variety of approaches (current and proposed) in the regulation and supervision of crowdfunding.

1. Peer-to-Peer Lending

The remit of securities regulators and the sharing of responsibilities among authorities involved in the supervision of the financial sector vary from jurisdiction to jurisdiction. This survey asked members to specify if peer-to-peer lending, or some form of it, is covered by their regulation.

The survey results demonstrate that in the jurisdictions where financial market supervision is conducted by one integrated regulator, peer-to-peer lending falls under the remit of the regulator, provided that the activity is captured by financial regulations. This is the case, for instance, in Germany, where BaFIN supervises lending platforms and/or their users in those cases where the activities performed, and the relevant contractual arrangements, trigger application of licensing requirements. Likewise, in the United Kingdom, the UK FCA is responsible for the prudential and conduct regulation of peer-to-peer lending between individuals or between individuals and businesses.

Conversely, in jurisdictions that have adopted a twin-peaks regulatory model, where one authority is responsible for prudential supervision and a second authority is responsible for business conduct supervision, the two regulators usually share responsibility for the oversight of peer-to-peer lending, each within its own remit. In The Netherlands, the prudential and the business conduct regulators issued a joint interpretation on crowdfunding, including peer-to-peer lending, to develop a practical, step-by-step plan that helps assess whether activities fall within financial sector supervision.

In other jurisdictions supervisory responsibilities in the financial sector are divided on the basis of the type of entity and the activity conducted, and/or the financial product offered. In this context, there may be a number of responsible authorities with its specific remit for the securities market, or the banking, or the insurance and/or pension funds sectors. There may be also a mixture of twin peaks and sectorial-based division of responsibilities.

---

5 See Appendix A: «List of Respondents». This number includes the United States Commodity Futures and Trading Commission («United States CFTC») which provided a response to the survey indicating that since the survey related to securities-based products and that it appeared to have no application to derivatives, the survey was not within the remit of the CFTC.
According to the survey responses, under these various supervisory models, peer-to-peer lending is typically under the purview of the prudential or the banking regulator, whenever the activity triggers application of licensing or registration requirements. Involvement of the securities regulator is sometimes envisaged where the activities of the platform are qualified as asset management / management of investment schemes; this is the case, for instance, in Australia and in the EU.

2. Investment-based Crowdfunding

All respondents indicated that they have some responsibilities concerning the regulation of Investment-based Crowdfunding ("CF"), as opposed to peer-to-peer lending, although the approaches vary from jurisdiction to jurisdiction.

In particular, the slight majority of respondents (12 out of 23) supervise CF only on the basis of their general, current securities regulatory framework and do not currently have plan to introduce a set of requirements specifically capturing CF. Depending on the business model adopted, CF-related activities may be subject to the vast majority of provisions applicable to market intermediaries, issuers and investment products. Broadly speaking, respondents mentioned that CF is captured by their supervision when and to the extent that:

- the activity of the funding portal manager triggers application of licensing or registration requirements (e.g., the portal manager holds client assets, provides investment advice and/or carries out other intermediation services, establishes secondary markets and / or offers services or products which may qualify as management of investment schemes); or
- the offering of investment products entails application of prospectus publication-related and/or authorization requirements.

In some instances, CF activities are typically subject to flexibilities in current law, such as waivers from licensing or registration and/or exemptions from authorization and/or prospectus publication related requirements.

---

6 This is the case, for instance, in Brazil, France, Italy and the United States.

7 In the EU, on 26 February 2015 the European Banking Authority (EBA) issued an Opinion on peer to peer lending and concluded that EU law does not currently cover the lending-related aspects. As a result, several risks and risk drivers that the EBA had identified are unlikely to be addressed. These risks include a lack of, or insufficient requirements on, any due diligence processes, assessments of borrowers’ creditworthiness conducted by a platform, and a lack of or insufficient safeguards against platform default. The Opinion is available at: [https://www.eba.europa.eu/documents/10180/983359/EBA-Op-2015-03+(EBA+Opinion+on+lending+based+Crowdfunding).pdf](https://www.eba.europa.eu/documents/10180/983359/EBA-Op-2015-03+(EBA+Opinion+on+lending+based+Crowdfunding).pdf)

8 Brazil, Germany, Hong Kong, Hungary, India, Mexico, Morocco, The Netherlands, Pakistan, Romania, Singapore, Turkey.

9 In this Report, the term funding portal refers to portals, web platforms, intermediary platforms or other similar terms. Funding portals are used by market intermediaries to complete CF offerings.

10 The issue has been mentioned, for instance, by the respondents from Brazil, Germany, Hong Kong, Singapore, and the Netherlands.
For example, some respondents mentioned that in their jurisdiction:

- CF offerings usually trigger exemptions from prospectus-related regulation, often because of the limited amount of securities subject to the offer;
- On-line portals where the CF offers are placed are managed by entities which are not subject to licensing and/or registration requirements because, for instance, they do not hold clients assets or provide intermediation services or are otherwise subject to exemptions; and
- The investment products offered do not qualify as “securities”, “transferable securities” and/or “financial instruments”\(^{11}\).

In Brazil, for example, securities public offerings can take advantage of an automatic non-registration waiver\(^{12}\), so long as:

- the issuer is classified as a micro or small sized company (maximum revenues of R$360,000 and R$3.6 million respectively per year), and
- the offerings made by such companies cannot exceed R$2.4 million in a twelve-month period.

Similarly in Hong Kong, the following offerings are generally exempted from prospectus requirements:

- an offering to professional investors (generally entities such as recognized exchange companies, recognized clearing houses, regulated banks, insurance companies, brokers, asset managers, pension and certain other investment funds, government bodies other than municipal governments) and high net worth investors (as prescribed by the relevant subsidiary legislation),
- an offering to not more than 50 persons,
- an offering in respect of which the total consideration payable for the shares or debentures concerned does not exceed HK$5 million (or its equivalent in other currency), or
- an offering in respect of which the minimum consideration payable by any person for the shares or, in the case of debentures, the minimum principal amount to be subscribed or purchased, is not less than HK$500,000 (or its equivalent in another currency).

---

\(^{11}\) For instance, in Germany, market participants make use of “participatory loans” or other instruments outside the scope of EU Directives, subject to lighter regulation.

\(^{12}\) Other minor conditions apply. Refer to Instruction CVM 400/03 article 5th
Some respondents reported that supervision of CF activities is conducted according to special *ad hoc* regulatory regimes, which have been recently adopted to address the peculiarities of this innovative way of collecting capital. This is the case in Canada\textsuperscript{13}, France\textsuperscript{14}, Italy\textsuperscript{15}, Japan\textsuperscript{16}, Spain, United Kingdom\textsuperscript{17} and the US\textsuperscript{18}.

In Korea\textsuperscript{19} rules on CF are proposed, but not yet adopted. In Australia, although no firm proposed regulation is yet in place, an advisory committee recommended a potential regulatory regime for equity CF\textsuperscript{20}.

\begin{itemize}
\item In Canada, the two following CF regimes (the “Canadian CF regimes”) have been adopted:
  \begin{itemize}
  \item On May 14, 2015, Québec, along with other provincial jurisdictions, adopted the Start-up crowdfunding registration and prospectus exemptions, containing a prospectus exemption available to non-reporting issuers only and a registration exemption for funding portals (the “Québec CF regime”), and
  \item On November 5, 2015, Québec, along with Ontario and other provincial jurisdictions, also adopted Multilateral Instrument 45-108 *Crowdfunding*, containing a crowdfunding prospectus exemption available to both reporting and non-reporting issuers, as well as a registration regime for a crowdfunding portal (the “Québec and Ontario CF regime”).
  \end{itemize}

\item In France the regime came into force on 1\textsuperscript{st} October 2014:
  \begin{itemize}
  \item French Ordonnance n° 2014-559 of 30 May 2014
  \item French Décret n° 2014-1053 of 16 September 2014
  \item Book III of the AMF General Regulation
  \item AMF Position – Non-guaranteed placement and crowdfunding – DOC-2014-10
  \item AMF Instruction DOC-2014-11
  \item AMF Q&A on crowdfunding.
  \end{itemize}

\item The Italian regulatory framework for equity crowdfunding is detailed below:
  \begin{itemize}
  \item Law Decree no. 179/2012 turned into law no. 221 of December 17, 2012;
  \item Consolidated Law on Finance (Legislative Decree no. 58/98, hereinafter also “CLF”): Article 1, para. 5-novies and para. 5-decies; Article 50-quinquies; art. 100-ter; (as introduced by the above mentioned decree);
  \item Consob Regulation no.18592 of June 26, 2013;
  \item Consob Communication no. 0066128 of August 1, 2013;
  \item Consob Communication no. 11720 of February 13, 2014.
  \end{itemize}

\item The new law is enforced from spring 2015.

\item In the United Kingdom, the FCA introduced new financial promotion rules for securities-based CF in April 2014, which apply in addition to existing FCA prudential and conduct of business requirements.

\item Responses regarding the CF framework in the United States were provided by SEC staff for survey purposes and relate to CF under Title III of the Jumpstart Our Business Startups Act.

\item Korea’s regulatory framework on CF focuses on equity CF. Rule changes proposed for the Financial Investment Services and Capital Market Act, which regulates brokers and issuers of publicly offered securities, are currently pending at the National Assembly.

\item In June 2013, the Australian Government initiated a review of the regulation of crowd sourced equity crowdfunding (CSEF). The Companies and Markets Advisory Committee (the Committee) that concluded the review reported to the Government in June 2014. The Australian Government consulted in December 2014 on a number of alternative regulations of CSEF, one of which is to adopt the Committee's recommendations. The Australian Government has announced that they will be proceeding with reforms to
\end{itemize}
In France, Italy, Spain and United Kingdom the specialized regimes do not, or would not, derogate from the general securities law provisions, which come primarily from the implementation of EU laws.

Rather, these regimes extend application of regulatory provisions into areas, which would otherwise be subject to exemptions and impose additional requirements on conduct of business so as to address investor protection concerns arising from CF.

Moreover, in the EU, on 18 December 2014 ESMA issued an opinion\(^{21}\) and advice\(^{22}\) on Investment based-Crowdfunding containing, among other things, an analysis of how the CF typical business models map across to the existing EU jurisdictions. In particular, the Prospectus Directive\(^{23}\) requires the publication of a prospectus before the offer of transferable securities to the public, or the admission to trading of such securities on a regulated market, unless certain exclusions or exemptions apply, including in relation to the size of the offer.

Furthermore, where applicable, MiFID\(^{24}\) would impose duties on the CF platform in its capacity as an investment intermediary carrying out MiFID services/activities in relation to financial instruments. Although at this stage CF platforms in the EU usually allow investors to choose individual projects in which to invest, it may well be that in the future they will structure themselves as managers of investment undertakings raising capital from a number of investors according to a defined investment policy, potentially triggering the application of the Alternative Investment Fund Managers Directive\(^{25}\). ESMA also observed that many platforms seem to be structuring business models to avoid MiFID and Prospectus Directive requirements and calls for further actions at EU level to ensure investor protection, without limiting the potential for CF to raise funds and support the real economy.

### B. Overview of specialized regimes or ad hoc special provisions dedicated to Investment-based Crowdfunding

In this section, we provide a summary description of the main features of specialized CF regimes, or national *ad hoc* provisions dedicated to CF, based on the survey responses. A summary table is attached to this Report with an overview of participants’ responses in the various areas covered by the survey (See Appendix B).

#### 1. Scope of CF specialized regimes

Certain jurisdictions place limitations on the types of investment that can be offered under the CF special regulatory regimes. For example,

---

facilitate CSEF by small public companies. In August 2015 the Australian Government consulted on facilitating CSEF by proprietary companies.

\(^{23}\) Directive 2003/71/EC.

\(^{24}\) Directive 2004/39/EC.

\(^{25}\) Directive 2011/61/EU.
• in France, under a new intermediary status of «conseiller en investissement participatif» («CIP»), only «plain vanilla» bonds and ordinary shares are allowed\textsuperscript{26},
• in Italy the special regime applies to offers through on-line portals of defined non-listed risk capital instruments issued by so called innovative start-ups, medium and small innovative enterprises, and collective investment schemes and companies chiefly investing in innovative start-ups and medium and small innovative enterprises;
• in Japan, only non-listed shares, non-listed stock option warrants and certain types of investment fund shares (e.g., anonymous partnership funds) are allowed under relaxed requirements;
• under the Canadian CF regimes, novel or complex securities are excluded, while common shares and some other non-complex securities\textsuperscript{27} are allowed.

2. Market intermediary and funding portal requirements

i. Authorization or registration requirements

Some respondents have created new categories of registration specifically designed for CF activities. In France, for example, investment firms (under Investment Service Provider status) authorized to provide investment advice must comply with the general current framework for the offering of securities implementing EU laws (e.g., as mentioned, MiFID, Prospectus Directive, etc.). But under the recently adopted CF framework, two new specialized intermediary statuses were created: CIP for securities (MiFID exempted entities), and “intermédiaire en financement participatif” (IFP) for loan-based and donation offerings.

In Italy, under the CF regime, CF portals managed by MiFID exempted entities are subject to newly established entry requirements and mandatory registration with Consob. In addition, MiFID authorized investment firms and banks running a CF portal shall notify Consob in advance of their intention to manage a CF portal. Such intermediaries are also subject to all MiFID requirements.

Similarly, under the United States SEC rules, an intermediary could conduct CF activities under a broker-dealer registration or seek a funding portal registration.

Under the Québec and Ontario CF regime, the intermediary has to be registered as a «restricted dealer».

In most cases, requirements regarding «fit-and-proper» management, owners and control persons apply generally, without any specific revision for CF activities.

\textsuperscript{26} However, under the pre-existent Investment Service Provider status (ISP) pursuant to MiFID regulation, a platform can offer complex products.

\textsuperscript{27} The following securities could be offered: common shares; non-convertible preference shares; securities convertible into common shares or non-convertible preference shares; non-convertible debt securities linked to a fixed or floating interest rate; units of a LP; and flow-through shares under the Income Tax Act.
Under the Québec CF regime, no registration requirement applies, but information is required to be delivered to the regulator about the funding portal and defined funding portal related individuals 30 days before the CF operations begin.

ii. Capital and insurance
Four jurisdictions made specific revisions of capital requirements for CF activities.

In Japan, under the new specialized framework, intermediaries that handle only small CF offerings (i.e., total amount offered is less than ¥100 million and amount of investment per person is ¥500,000 or less) are subject to a lower minimum capital requirements.

In Korea, lower capital requirements are also proposed.

In France, in exchange for the absence of capital requirements, CIPs are excluded from engaging in other activities (i.e. they do not benefit from the MiFID passport), must have professional indemnity insurance, are prohibited from passporting activities outside of France, and may only offer securities for limited amounts (up to €1,000,000 per project per year).

In Spain, online web-based platforms must have initial capital of €60,000 or a qualified indemnity insurance. Such amount must be proportionally increased depending upon the financing sum. Also, financial statements of an online web platform will be required to be audited on an annual basis.

iii. Suitability and other conduct of business provisions
Some respondents have exempted (or propose to exempt) intermediaries carrying out CF activities from the suitability assessment: Canada, Korea, Spain.\(^{28}\)

Under the United States SEC rules, funding portals would be prohibited from providing investment advice and recommendations to investors, so suitability obligations would not apply.

Similarly, in Italy, portal managers, which are not MiFID firms, are prohibited from carrying out financial advisory services, dealing or underwriting and from holding investor funds and assets. They shall transmit their orders exclusively to authorized MiFID intermediaries, which will responsible for their execution. Thus, their fundamental role is to ensure that investors can understand the features and risks of the proposed investments, examining the information given through the portal and investor education released by Consob. Conversely, if the portal manager is a MiFID intermediary, the bulk of ordinary MiFID conduct of business rules (e.g., know your customer, suitability assessment) shall apply, in addition to the special CF conduct of business rules.

In the Netherlands, if the platform is a MiFID intermediary, the full MiFID rules apply, including the conduct of business rules. If the platform is involved in extending loans to private persons, the platform is an offerer in consumer credit. The EU consumer credit requirements apply and the distance marketing of consumer financial service directive apply. The platform is subject to conduct of business rules, duty of care to the customer and requirements to mitigate risk. If the

---

\(^{28}\) In Spain, for accredited investors.
platform is involved in extending loans to business entities, it is an intermediary in deposits and needs an exemption. The supervisory authority can make the exemption subject to fulfilling certain conditions, such as conduct of business rules or specific requirements tailored to mitigate risks in the business model of the relevant platform.

In Germany, if the platform falls under MiFID’s remit, the entire MiFID rules, especially the conduct of business rules including the suitability assessment, apply.

In France, the platforms (under CIP or Investment Service Provider status) must provide investment advice to investors and allow only a restricted, gradual access of potential investors to the funding portal. Investors may access information on the securities offered only after confirming acceptance of the related risks that are disclosed to them, and may subscribe for securities only after the completion of a suitability assessment. In this context, the investor answers questions relating to his/her family, matrimonial and financial situation, knowledge and experience in financial matters as well as investment objectives. These questions allow the funding portal to confirm whether the investment recommended among the selected projects is suitable to the profile of the investor. Several projects should be selected at any time following predetermined and transparent criteria.

iv. Marketing of the market intermediary or the offering

With respect to marketing requirements, specific measures regarding solicitations and recommendations, disclosure of compensation as well as objective criteria for the selection of projects have been implemented or proposed.

For instance, CF portal managers are sometimes forbidden (or are proposed to be forbidden) from advising or making recommendations as well as from soliciting purchases (Australia, Canada, France, Italy, United States SEC rules for registered funding portals). In Japan, intermediaries who handle security-based crowdfunding are prohibited from making solicitations by telephone or visiting customers’ homes.

In France, information on the characteristics of an offering may be provided only to investors who have explicitly accepted the risks that have been clearly disclosed to them.

In Italy CF portal managers cannot allow retail investors to subscribe to an offer presented on the portal unless such investor has previously:

- examined the investor education information given on Consob’s web-site;
- responded positively to a questionnaire on the main features and risks of investing in innovative start-ups; and
- stated affirmatively that they are able to economically sustain the complete loss of the investment they intend to make.

In the United Kingdom, the FCA introduced new financial promotion rules for securities-based CF in April 2014, which apply in addition to existing FCA requirements. These changes limit the

29 The prohibition applies if the portal is managed by a non-MiFID firm.
ability of firms to market CF offers of illiquid securities to the following types of consumers in the retail market:

- those who take regulated advice;
- those who qualify as high net worth or sophisticated investors; or
- those who confirm they will invest less than 10% of their net assets.

Past performance disclosure must also meet certain requirements. For example, it must include annualized performance data and disclose the effect of charges.

Under Spanish law, CF funding portals should operate according to the principles of neutrality, transparency and act in accordance with the best interest of their clients. They could advertise and conduct commercial communications on specific projects when the selection is based on objective and non-discriminatory criteria and neutrality and other principles. Under United States SEC rules, funding portals may advertise the existence of the funding portal and identify one or more issuers or offerings available on the portal on the basis of objective criteria, subject to certain conditions, including that the funding portal does not receive special or additional compensation for identifying the issuer or offering in this manner. Also, SEC rules permit a funding portal to determine whether and under what terms to allow an issuer to offer and sell securities through its platform.

Also, under the United States SEC rules, defined persons who promote an issuer’s offering for compensation, whether past or prospective, are required to clearly disclose in all communications on the funding portal the receipt of the compensation and the fact that he or she is engaging in promotional activities on behalf of the issuer. Issuer disclosures have to be filed with the SEC, in addition to such information being made publicly available on the intermediary/funding portal website.

The information is required to be publicly available for at least 21 days prior to any sales under the offering and until the offering is completed or cancelled.

In a consultation paper on Facilitating Securities-Based CF issued by MAS Singapore on 16 February 2015, it was clarified that under Singapore’s existing securities law, any person who makes offers of securities in reliance of prospectus exemptions is restricted from advertising, or making statements referring to specific offers published on the CF platform. Notwithstanding the restriction, a CF operator is not prohibited from advertising the existence of its platform. Such advertisement may include general information about the platform and its business model, so long as the advertisement does not include any information on specific offers.

**v. Conducting due diligence on the offering**

According to the survey results, regulators either have, or propose to have requirements related to an intermediary’s role regarding the offering and the need to conduct some due diligence on the offerings in terms of mandatory review, disclosure and reporting to the regulator.

Under the Québec and Ontario CF regime, for instance, an intermediary is required to understand the general structure, features and risks of securities presented on its funding portal. It is required
to review the information presented by the issuer on its website to form a reasonable belief that the information adequately sets out the:

- general features and structure of the security,
- issuer-specific risks,
- parties involved and any inherent conflicts of interest, and
- intended use of funds.

An intermediary could assist an issuer in the preparation of an offering document, business plan or other document, in respect of an offering prior to posting on its website, provided that the service is limited to assisting the issuer in complying with its disclosure obligations and ensuring that the information is presented in a fair, balanced and reasonable manner. Also, the intermediary must notify the committed investors in case of a material change or cancellation of the offering. In addition, the Québec and Ontario CF regime includes reporting requirements to the regulator regarding successfully completed offerings as well as issuers who have been denied access to or have been removed from a portal.

In France, platforms (under CIP or Investment Service Provider status) must perform due diligence in selecting the projects and disclose the pre-determined criteria used in the selection process.

In Italy, the portal manager must check that the regulatory conditions for the offering and that the admission of the offer in the portal have been fulfilled (for the list of conditions, see below under «3. Issuer Requirements»).

In Japan, intermediaries are required to conduct due diligence on issuers and their business plans and to provide information through the funding portal in order to ensure that the issuers have genuine business ideas. Under the Korean proposal, intermediaries would be required to verify the financial condition of the issuers and disclose relevant information on the funding portal.

Two notable exceptions to the due diligence requirements are Spain and the United States SEC rules. In Spain, an intermediary is not required to assess CF projects for investors. In the United States, the rules do not specify procedures for conducting due diligence, although an intermediary is required to deny access to its funding portal if it has a reasonable basis for believing that an issuer, or any of its officers, directors and other defined persons, is subject to a disqualification under the rules.\(^{30}\)

\(^{30}\) While the United States SEC rules do not provide specific procedures for due diligence, they require that an intermediary take measures to reduce the risk of fraud including, but not limited to, having a reasonable basis for believing that an issuer is complying with the securities laws and obtaining background and securities enforcement regulatory history checks on the issuer.
vi. Use of a website
The survey results revealed that the frameworks for CF activities generally mandate or propose to mandate the use of a website (e.g., France, Italy, Japan, Korea, the Netherlands, Québec, Spain, and United States SEC rules). One significant exception is the United Kingdom, where the rules aim to be media-neutral.

vii. Communication channels
Three respondents specifically addressed the use of communications channels for CF offerings in terms of the traceability of comments and the use of electronic forums.

For example, under the Québec and Ontario CF regime, if a funding portal offers a discussion board or other means of communication between investors and/or an issuer and its investors (for example, chat rooms or a blog), the funding portal must monitor postings to confirm that the issuer is not making any statement or providing information that is inconsistent with the CF offering document or is not in compliance with the CF rule and remove any material that may contain a statement or information that is false, deceptive, misleading or that may constitute a misrepresentation or untrue statement of a material fact.

Australia is considering requiring intermediaries to facilitate a moderated electronic forum for investors and issuers. The forum will give investors an opportunity to comment on offers and issuers responding to questions publicly.

The United States SEC rules require an intermediary to provide, on its actual website or «platform», channels through which investors can communicate with one another and with representatives of the issuer about offerings made available on the intermediary’s funding portal, subject to certain conditions.

The intermediary (in the case of a registered funding portal) is prohibited from participating in any communications in the communication channels, apart from establishing guidelines for communication and removing abusive or potentially fraudulent communication.

viii. Custody of assets and processing of trading/subscription orders
A number of jurisdictions provide (or propose to provide) clear limitations on the custody of investor assets under their special CF regimes, primarily in terms of appointment of a qualified third party to hold client assets (Korea, Japan, Spain31, and United States SEC rules, for intermediaries acting under the new category of “funding portals”), prohibition to hold assets and/or funds (France, Italy32) and the processing of trading/subscription orders.

In Italy, for example, for each offer, the funds necessary for processing orders are deposited in the escrow account held in the issuer's name at the MiFID intermediary, which will execute the orders.

---

31 Unless the platform is authorized as a hybrid payment service provider.
32 The prohibition applies if the portal is managed by a non-MiFID firm.
In France, intermediaries must not provide payment services. They can provide the auxiliary service of transferring the subscription forms to the issuers, provided that service does not fall within the scope of «Reception and Transmission of Orders» service under MiFID.

Under the United States SEC rules, an intermediary that is a funding portal is required to ensure that investors send money or other consideration directly to a third party that has agreed in writing to hold the funds for the benefit of, and to promptly transmit or return the funds to, the persons entitled. The third party may be a registered broker or dealer that carries customer or broker or dealer accounts and holds funds or securities for those persons. Alternatively, the third party may be a bank, or a credit union insured by the National Credit Union Administration, that has agreed in writing either (i) to hold the funds in escrow for the persons who have the beneficial interests and to send or return such funds directly to the persons entitled when so directed by the funding portal or (ii) to maintain a bank or credit union account (or accounts) for the exclusive benefit of investors and the issuer. Proceeds are to be transmitted to the issuer only if the target-offering amount is met or exceeded.

ix. Civil liability
The United States SEC rules specify a civil liability regime for CF activities. On the basis of the issuer definition, intermediaries, including funding portals, could be considered issuers for purposes of this liability provision. Under this liability provision, an investor could bring an action against the issuer to recover the consideration paid for the security, with interest, or for damages if the person no longer holds the security.

Australia is considering mandating that intermediaries be a member of an external dispute handling body.

x. Conflicts of interest management
A few jurisdictions directly addressed the issue of conflicts of interest: Italy, Canada, the United States SEC rules and France.

In Italy the portal manager is specifically required to act with diligence, fairness and transparency, avoiding any conflicts of interest, which could arise in the management of the portal that may affect the interests of the investors and the issuers. The manager shall ensure equal treatment of the beneficiaries of the offers who are in identical conditions. Moreover, the funding portal must contain information regarding the measures adopted to manage conflicts of interest.

France also provides for specific requirements regarding conflicts of interest. CIPs shall take all reasonable measures to detect conflicts of interest and shall establish and maintain an effective

33 Registered broker-dealers have similar requirements except that registered broker-dealers – unlike funding portals – may receive the funds, but would then have to (i) promptly deposit them in a separate bank account, as agent or trustee for the persons who have the beneficial interests, until the appropriate contingency has occurred, and thereafter to promptly transmit or return the funds to the persons entitled or (ii) promptly transmit the funds to a bank which has agreed in writing to hold all such funds in escrow for the persons who have the beneficial interests and to transmit or return such funds directly to the entitled persons when the contingency has occurred.
conflicts of interest policy. Regarding fees, CIPs can only receive funds that remunerate their own activities.

Other jurisdictions have specific requirements regarding conflicts of interest management for CF activities in terms of the intermediary’s financial interest in the issuer and compensation. For example, the Québec and Ontario CF regime prescribes that the intermediary:

- may not allow an issuer access to the funding portal’s website if the funding portal, or any officer, director or significant shareholder of the funding portal or any affiliate of the funding portal has an ownership interest of more than 10% of the issued and outstanding securities of the issuer, and
- will disclose all compensation and fees paid by issuers to the funding portal.

In the United States, the SEC rules prohibit certain intermediary personnel from having financial interests in an issuer on its platform. However, an intermediary may have a financial interest in an issuer, provided that the intermediary receives the financial interest from the issuer as compensation for the services provided to, or for the benefit of, the issuer in connection with the offer or sale of such securities being offered or sold through the intermediary’s platform; and the financial interest consists of securities of the same class and having the same terms, conditions and rights as the securities being offered or sold through the intermediary’s platform. The intermediary is required to disclose compensation arrangements with the issuer. Particularly, the SEC rules require intermediaries, when establishing an account for an investor, to clearly disclose the manner in which they will be compensated in connection with offerings and sales of securities.

**xi. Risk mitigation**

The survey responses indicated that several jurisdictions adopted, or are considering adopting measures to mitigate risks inherent to the conduct of CF activities. The most common measures are addressed below.

**a) Funding portal failure, back-up and IT systems, cyber risk**

In Italy, a portal manager is required to ensure the integrity of the information received and published providing itself with reliable and secure operating systems. Particularly, the portal manager shall identify the sources of operating risks, adopt adequate procedures and controls, avoid operational interruptions, and provide suitable back-up facilities. Consob examines internal procedures (including IT) at registration and on an ongoing basis.

In Japan, intermediaries are required to provide information appropriately through the funding portal. This includes establishing proper IT systems and procedures for addressing system failures.

In France, the platform is required to have the necessary resources and procedures to carry out their activities and to implement those resources and procedures with efficiency. The AMF examines internal procedures and IT systems.

Under Spanish law, intermediaries are required to have sound procedures to ensure security, confidentiality, and reliability of service provided by electronic mechanisms to ensure that in
case of activity cessation, they continue to provide all or part of the services that are committed to provide.

b) Fraud, money laundering, financing terrorism
In Italy, the funding portal must contain, in a summarized and easily comprehensible form, the information regarding the measures adopted by the portal manager to reduce and manage fraud risks.

The responding jurisdictions have not mandated any specific measures to address risks regarding money laundering and financing terrorism in the context of CF activities. The general legal framework applies in this respect.

3. Issuer related requirements

i. Location of the issuer
A number of jurisdictions place (or propose to place) limitations on the location of an issuer that can benefit from the CF framework. This is the case in Australia (CF will be restricted to public companies incorporated in Australia, with its business predominantly operating in Australia and, with Australian major shareholders and directors), Canada (issuer is required to be organized or incorporated in Canada with a head office in Canada and with a majority of the directors resident in Canada), Italy (issuer shall have head office in Italy), Spain (incorporated either in Spain or another European Union member state), Québec (where the Québec CF regime provides that the issuer’s head office has to be in a Canadian jurisdiction participating to a similar regime) and the United States SEC rules (need to be incorporated in one of the 50 states, a territory, or the District of Columbia).

ii. Size and limit of the offering
Similarly, almost all jurisdictions with a specialized CF regime place a limit on the size and timing of an offering. Canada is illustrative of this commonality.

Under the Québec and Ontario CF regime, an issuer group\(^{34}\) cannot raise more than CA$1.5 million that includes the proceeds to be raised under the distribution, and the aggregate proceeds received by the issuer group during the 12 month period ending on the last day of the distribution period.

Other jurisdictions with similar restrictions (or proposed restrictions) (albeit the precise amount raised differs) include Australia, Korea, Spain, and the United States SEC rules.

Under the Québec CF regime, only 2 raises per year are permitted, each for a maximum of CA$250,000.

In Italy, equity CF offers must have a total amount lower than €5 million.

---

\(^{34}\) Issuer group includes the issuer, an affiliate of the issuer and any other issuer that is engaged in a common enterprise with the issuer or with an affiliate of the issuer.
In France, the size of the offer cannot exceed €1 million per project (over a 12-month period) and offers up to this size are also exempt from the requirement to publish a prospectus.

In Japan, the limitation of the size of the CF offer is regulated not as an issuer requirement, but as a requirement for the CF portals.

**iii. Type or size of the issuer**

While most jurisdictions do not place limitations on the type or size of issuers that may avail themselves of a CF offering, four notable exceptions exist. In Italy, equity CF portals provide for the collection of risk capital only by innovative small and medium enterprises, innovative start-ups (i.e.: small Italian unlisted companies which have been operating only for a short time, and are engaged in innovative and technical sectors or which have a social purpose) and collective investment schemes and companies chiefly investing in innovative start-ups and medium and small innovative enterprises. Under the Québec and Ontario CF regime, investment funds and blind pools cannot use CF prospectus exemption. Similarly under the United States SEC rules, issuers that are subject to reporting requirements under certain sections of the federal securities laws in the United States, investment companies, issuers not eligible to offer and sell securities as a result of certain disqualifications, issuers that have not filed, to the extent required, certain ongoing reports, and issuers that have no specific business plan or that have indicated that their business plan is to engage in a merger or acquisition with an unidentified company or companies are not eligible to raise funds using the CF exemption. Finally, under Australia's latest proposal issuers could not be listed on a financial market and would need to have less than $5million in assets and annual turnover.

**iv. Other similarities**

Additional similarities across regimes include:

- the need for the issuer to provide a business plan (or similar document) to the funding portal, the regulator and/or investors (France, Italy, United States SEC rules)\(^{35}\),
- the requirement or proposed requirement that offerings are only open for a set period of time and if the targeted or minimum amount of funds have not been raised during the offering period, the offering must be withdrawn and funds returned to investors (Canada, Korea, Spain, United States SEC rules),
- the requirement that an issuer can only offer its securities under the CF regime on one funding portal during the distribution period established by the issuer (Canada, Spain, United States SEC rules), and
- no jurisdiction requires that an issuer keep “skin in the game.”

With respect to issuer requirements, there were a few other interesting points that arose from the survey results. In Italy, for example, recognition of tag-along rights for retail investors is a condition precedent for the admission of the offer on the funding portal. In particular, the portal manager must check that the issuer's articles of association or deed of incorporation provide for the right of retail investors to withdraw from the company or to sell the stake, in case the

\(^{35}\) In Japan, instead of stipulating the issuer requirement to provide a business plan to the funding portal, the funding portal has the obligation to obtain the issuers’ business plan.
controlling shareholders, after the closure of the offer, transfer the company's control to third parties. Such rights are recognized, in any case, for at least three years from the conclusion of the offer. Moreover, an offer can be successfully completed only provided that professional investors, banking foundations or innovative start-up incubators, undersign 5% of the financial instruments offered.

In the Netherlands, a CF funding portal must state on its website that these types of offerings are made outside the scope of supervision of the AFM.

In the United Kingdom, because the Companies Act prohibits the public offering of private company shares, the FCA expects investment-based CF funding portals to facilitate the sale of UK public limited company shares only (not private company shares). Where public limited company shares are being offered to the public, a prospectus may be required unless an exemption applies (for example, offers below €5 million may be exempt under the EU Prospectus Directive).

Under the Québec and Ontario CF regime, a CF offering cannot be completed unless, at the time of completion of the offering, the minimum amount indicated in the offering document which must be sufficient to accomplish the business objectives of the issuer has been subscribed for. Finally, in France, in practice, light corporate structures make up most of the companies interested in CF. Therefore, the legislation authorized investments in light corporate structures, such as the French “société par actions simplifiée”– a simplified limited liability corporation, under certain conditions.

4. Disclosure requirements

i. Offering document disclosure, other than financial disclosure

Some jurisdictions (Korea, United States SEC) prescribe (or have proposed rules with) specific disclosure requirements for CF offerings, where completed on a non-exempt basis (i.e. by prospectus). In addition, some other jurisdictions (Canada, France, and Italy) prescribe the form and content of CF offering documents. In Italy and in France, CF offering documents shall be published notwithstanding where the offer triggers an exemption from the general prospectus publication related provisions.

Under the United States SEC rules, disclosure of various items is required including the name and address of the issuer, directors and officers, holders of more than 20% of the issuer’s securities, description of the business of the issuer, anticipated business plan of the issuer, financial condition, intended use of proceeds, target offering amount (and a deadline to reach the target offering amount), number and price of the securities being offered, capital structure and ownership of the issuer, referral fees, risk factors, information about an investor’s right to cancel his/her investment, and certain related party transactions. The United States SEC rules also provide an optional question and answer format that an issuer could use to provide the required disclosures.

Under the Québec and Ontario CF regime, the CF offering document is required to be in a prescribed form with information provided under defined headings including:
• warnings to investors
• financing facts (offering summary, description of securities offered and relevant rights, ability to resell securities, right of action for misrepresentation and right of withdrawal, concurrent offerings, use of proceeds, description of the issuer’s business, other CF offerings, persons promoting and marketing the offering),
• issuer facts (business of the issuer, principal risks facing the business, financial information, ongoing disclosure, mining issuer disclosure, capital structure, executive officers, directors and other principals, management compensation, related party transactions, other relevant information),
• registrant facts (registered funding portal) and contact information (issuer and registered funding portal).

Other jurisdictions (France, Italy, and Québec) also have a template CF offering document disclosure.

In France, the AMF published a template-offering document for CF offerings. The information drawn up by the issuer and supplemented by the platform must be provided to investors by email prior to any subscription. The document must be short, easy to read, standardized for comparability and digital friendly (numerous HyperText links to give easy access to detailed information)³⁶.

In Italy, a special regime applies to on-line CF offers requiring publication on the funding portal of an information form compiled according to the model laid down in Consob regulations. The information shall be clear and concise (no more than five pages), expressed in non-technical language and shall allow for comparison across the offers in the portal. The form must contain a list of information concerning the risks and the terms and conditions of the offer and a warning on the highly risky nature of the investment.

   ii. Disclosure regarding risks
A number of jurisdictions (Canada, Italy, France, Japan, United States SEC rules) have specific disclosure requirements relating to the risks of CF offerings.

These risks include such things as liquidity, the absence of a secondary market, restrictions on the ability of an investor to cancel the investment, the risk of not getting expected performance on the securities purchased, risk of not being able to influence management of the issuer, dilution risk, and inability to obtain a return on the investment.

In France, the platform must provide a description of the specific risks linked to the business and to the project owner. Australia is considering disclosure on the promoter's track record³⁷.

³⁶ In drawing up the template, the AMF took into account the models currently offered under EU law, namely the EU KID-UCITS and the summary of a prospectus.
³⁷ «Promoter» refers to the project owner, i.e. the directors of the company raising funds.
iii. Financial disclosure in offering documents

A number of jurisdictions (France, Germany, Korea, Singapore, United States SEC rules) require (or propose to require) financial statements in CF offering documents, either as part of the regulations relating to CF offerings or through company law or other regulations. Other jurisdictions, however, (Japan, Québec, United Kingdom) do not require financial statements in CF offering documents.

For some jurisdictions that require (or propose to require) financial statements in CF offering documents by non-reporting issuers, the nature of the review (if any) by external auditors depends on the size of the offering or other defined factors. For example:

- Under the United States SEC rules, CF offerings raising proceeds of less than US$100,000 are required to disclose certain information from the issuer’s federal income tax returns for the most recently completed year, if any, and its financial statements that are certified by the principal executive officer of the issuer to be true and complete in all material respects. Issuers offering more than US$100,000, but not more than US$500,000, are required to include financial statements reviewed by a public accountant that is independent of the issuer. Issuers offering more than US$500,000 are required to include audited financial statements in their CF offering document. An issuer offering more than $500,000 but not more than $1 million of securities relying on these rules for the first time is permitted to provide reviewed rather than audited financial statements, unless financial statements of the company are available that have been audited by an independent auditor.

- In Korea, audited financial statements in CF offering documents would only be required where the offering size is more than KRW100 million. Offerings smaller than that size may include financial statements, accompanied by a confirmation letter from the chief executive officer of the issuer.

- Similarly under the Québec and Ontario CF regime, audited financial statements in CF offering documents are only be required if the non-reporting issuer has raised an aggregate of CA$750,000 or more since its formation. Financial statements that have been reviewed by an independent public accounting firm are required if the non-reporting issuer has raised an aggregate of more than CA$250,000 but less than $750,000 since its formation.

Also, some jurisdictions require or propose to require financial disclosure in addition to financial statements in the CF offering document. For example, the United States SEC rules require an issuer to provide a narrative discussion of its financial condition in its offering document. The discussion should address, to the extent material, the issuer’s historical results of operations in addition to its liquidity and capital resources. The discussion should take into account how the proceeds from the offering will affect the issuer’s liquidity and whether these funds or any other additional funds are necessary to the viability of the issuer’s business.

Most jurisdictions do not require or propose to require updated financial information or other information during the offering period for the CF offering. Three exceptions are Italy, France and
the United States SEC rules. Under the United States SEC rules, an issuer is required to amend its disclosure for any material change in the offering terms or disclosure previously provided to investors.

iv. Ongoing disclosure requirements
All jurisdictions require that CF issuers that are reporting issuers comply with customary continuous disclosure requirements. For CF issuers that are not reporting issuers, the requirements range from exemption to notification in case of changes and prescribed documentation.

Under the Québec and Ontario CF regime, a non-reporting issuer must deliver annual financial statements to the regulator and make them available to each purchaser. The financial statements must be accompanied by a notice of the issuer disclosing in reasonable detail the actual use of the gross proceeds of the distribution. In addition, a non-reporting issuer must make available to each of its security holders within 10 days of their occurrence a notice of each of the following events:

- a discontinuation of the issuer’s business,
- a change in the issuer’s industry, or
- a change of control of the issuer.

Under the United States SEC rules and in the United Kingdom, issuers are required to provide reports of the results of their operations and financial statements on an annual basis.

Under the Australian proposal, CF issuers that are newly created public companies would be eligible for some exemption for a certain limited time period or until the company meets certain criteria, such as net tangible assets over A$5 million. During this exempt period, the issuer would be exempt from some of the requirements placed on public companies (or at least have the requirements modified), such as holding an annual general meeting, continuous disclosure and financial and other reporting. Australia is also considering requiring the communication to investors of any material adverse changes during the offer period.

In Japan, while CF issuers are not subject to special ongoing disclosure requirements, CF portals are required to assure that CF issuers provide investors information in relation to their business periodically.

v. Access to offering and ongoing disclosure documents
Canada, Italy, Spain, France and the United Kingdom require that offering and other disclosure documents be provided to investors either through the website of the intermediary/funding portal, or through other reasonable means.

In Italy the information shall be updated, accessible for at least 12 months after the closure of the offers and made available to the interested parties upon request for 5 years.

In addition, Italy and the United States SEC rules require or would require that this information also be posted on the issuer’s website.
vi. When do ongoing disclosure requirements end?

Some jurisdictions have specific tests (based on factors like the number of security holders or specific events) for when ongoing disclosure requirements end.

For example, a non-reporting CF issuer under the Québec and Ontario CF regime is required to provide certain limited ongoing disclosure until the earliest of the following dates:

- the issuer becomes a reporting issuer (public issuer),
- the issuer has completed a winding up or dissolution, or
- Less than 51 security holders own the securities of the non-reporting issuer.

Under the United States SEC rules, a CF issuer is required to provide ongoing continuous disclosure related to its offering until:

- the issuer becomes a “reporting company,”
- where all of the CF securities are repurchased,
- the issuer dissolves or liquidates its business,
- the issuer has filed at least one annual report and has fewer than 300 holders of record, or
- the issuer has filed at least three annual reports and has total assets that do not exceed $10 million.

Similarly, in the United Kingdom, public companies must continue to make certain information available, including their accounts, which is accessible to investors while they are in business.

5. Investor requirements

In virtually all of the jurisdictions with current or proposed special CF frameworks, there are a number of similarities in the general approach concerning how to protect investors. These protections range from limitations on the amount that may be invested, to education requirements, risk warnings, cancellation rights and/or other jurisdiction specific protections.

i. Investing Limits

Most of the participating jurisdictions place or propose to place limits on the investment amount as noted in the table below:

<table>
<thead>
<tr>
<th>JURISDICTION</th>
<th>LIMITATION ON INVESTMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Australia (proposed)</td>
<td>A$25,000 per annum with no more than A$10,000 in a single issuer.</td>
</tr>
<tr>
<td>Canada (“Québec and Ontario”)</td>
<td>No more than CA$2,500 per investment. In Ontario, no more than CA$10,000 in total under the CF prospectus exemption in a calendar year</td>
</tr>
<tr>
<td>Country</td>
<td>Limit Description</td>
</tr>
<tr>
<td>------------------------------</td>
<td>-----------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Ontario CF regime</td>
<td>(higher limits apply to accredited investors).</td>
</tr>
<tr>
<td>Canada (Québec CF regime)</td>
<td>No more than CA$1,500 per investment in total under the CF prospectus exemption</td>
</tr>
<tr>
<td>Japan</td>
<td>¥500,000 in a single issuer per year by an investor per year. ¥100 million per year in an issuer by all the investors in total per year.</td>
</tr>
<tr>
<td>Korea (proposed)</td>
<td>200% of the investor’s annual income or property ownership. A cap of KRW2 million per issuer and a cap of KRW10 million for a twelve month period. However, there is no cap for sophisticated investors.</td>
</tr>
<tr>
<td>Netherlands</td>
<td>€40,000 for lending funding portals and €20,000 for equity/debt funding portals.</td>
</tr>
<tr>
<td>Spain</td>
<td>€3,000 per offering or €10,000 per year per funding portal, and equity securities cannot contain a derivative component for non-accredited investors.</td>
</tr>
<tr>
<td>United States</td>
<td>If either annual income or net worth is less than US$100,000, then there is a limit of the greater of US$2,000 or 5% of the lower of annual income or net worth. If both annual income and net worth are equal to or greater than US$100,000, then a limit of 10% of the lower of annual income or net worth, but not to exceed US$100,000.</td>
</tr>
</tbody>
</table>

### ii. Rescission, cancellation and resale limits

A number of jurisdictions (Australia, Canada, Italy, Japan, Korea, United States SEC rules) provide (or propose to provide) certain cancellation or rescission rights to investors.

In Italy, retail investors shall enjoy a cooling off period of 7 days after order execution. Retail investors are also granted a rescission right in the event of a material change to the offering.

In Canada, investors have the right to withdraw any offer or agreement to purchase the security by delivering a notice to the issuer within 48 hours of the date of subscription.

A similar right exists in Korea where investors would be permitted to cancel their investment commitment prior to the end of the subscription period.

Similarly, under the United States SEC rules, investors have an unconditional right to cancel an investment commitment for any reason until 48 hours prior to the deadline identified in the issuer’s offering materials. Thereafter, an investor is only able to cancel in the event of a material change to the offering.

Regarding resale of CF securities, four jurisdictions (France, Italy, Spain, and United Kingdom) do not provide any limitations, while three jurisdictions do (or propose to) provide some limits (Canada, Korea, United States SEC rules).

In Canada, securities of a non-reporting issuer (for example, a private company) acquired through CF could not be resold until the issuer becomes a reporting issuer, unless the sale is made under another prospectus exemption. In Canada, securities of a reporting issuer acquired through CF are subject to a four-month hold period.
In Korea, investors in CF offerings must keep their securities under the management of a qualified third-party custodian and are prohibited from withdrawing or trading the securities for one year.

Finally, under the United States SEC rules, purchasers are not allowed to transfer their securities for a period of one year except if a transfer is:

- to the issuer of the securities,
- to an accredited investor,
- as part of an offering registered with the United States SEC, or
- to a family member of the purchaser (or the equivalent) or in connection with certain events such as death or divorce of the purchaser, in the discretion of the SEC.

IOSCO members were asked to identify requirements, if any, regarding secondary markets and operation of financial markets. In Canada, CF funding portals cannot act as intermediaries or facilitators of secondary trades between buyers and sellers. In Brazil, Japan and under United States SEC rules (in the case of registered broker-dealers), only CF portals registered as administrators of organized markets can act as intermediaries or facilitators of secondary trades.

### iii. Risk acknowledgement form and education requirements

Six jurisdictions (Australia, Canada, France, Italy, United States SEC rules and United Kingdom) require (or propose to require) investors to sign the equivalent of a risk acknowledgement form that provides certain warnings to investors related to CF investments.

Under the Canadian CF regimes, for example, at or before the time an investor enters into an agreement to purchase the security, the issuer is required to obtain a signed risk acknowledgement form from the investor in which the investor confirms that he/she falls within the investment limits and acknowledges the risks associated with the investment, including the following:

- it is a risky investment,
- the investor could lose all of the money he/she invests,
- the investor may never be able to sell the securities,
- the investor will be provided with no disclosure or less disclosure than public companies, and
- the investor will not have the benefit of protections associated with an investment made under a prospectus.

From an educational perspective, CF funding portals must take reasonable steps to ensure that investors understand the risks of a CF investment. While not mandatory, funding portals operating under the Québec and Ontario CF regime could require investors to correctly answer questions via an interactive questionnaire conducted at the time of account opening to demonstrate that the investor understands the level of risk in this type of investment (and this should be done annually).
In Italy, the portal manager must ensure that retail investors may access sections of the portal where it is possible to adhere to the single offers only provided that they:

- have read the information of the investor education sections of the Consob website and of the Registry of Enterprises web-site;
- answered positively to a questionnaire demonstrating the full understanding of the essential features and main risks related to the investment in innovative start-ups via portals;
- stated that they can financially afford the possible entire loss of the investment they intend to make.

Under the United States SEC rules, potential investors are required to consent to electronic delivery of materials and complete a written questionnaire that acknowledges certain risks, and provides a representation that the investor has reviewed educational materials.

The United Kingdom also provides this protection in that a risk acknowledgement form is included in the statements signed by certified sophisticated investors, certified high net worth investors and restricted investors.

In Australia, intermediaries would have to issue a Financial Services Guide to retail investors.

In France, the suitability test takes into account the required risk warning and risk acknowledgement. That is, under French law, access to CF funding portals is restricted to registered investors who have been previously informed through two types of warnings regarding the risks associated with an investment in a non-listed company – risk of losing all or part of the capital invested and the risk of the lack of liquidity - and have explicitly accepted these risks. In addition, in France, the AMF published an educational guide for investors on its website.

### iv. Unique, jurisdiction-specific protections

Regulators in various jurisdictions have established other protections for investors utilizing a CF funding portal.

Under the Québec and Ontario CF regime, for example, an issuer, a funding portal, and their respective directors and executive officers must not lend or finance, or arrange lending or financing (for example, from an affiliate), for an investor to purchase securities of the issuer under the exemption. Australia is considering a similar restriction.

In the Netherlands, CF funding portals are required to inform investors to actively and continuously spread their investments across projects. In addition, to help protect investors, funding portals must:

- actively and continuously inform investors of the risks of their investments,
- have a policy to assess the credit risk of loans offered,
- provide risk qualifications based on the debtor’s ability to repay a loan,
- provide a range of interest rates corresponding to the risks of a project,
• charge no more than 15% interest on a loan to a consumer and have a policy to prevent consumers from over-extending on loan amounts,
• warn the consumer that wants to invest more than € 5,000 actively about the risks of the investment,
• advise the consumer to invest a sensible amount of their fortune,
• provide enough information to the consumer so the consumer can make a well informed investment decision,
• include the financial/payment history of the project owner in the risk assessment of the loan,
• check if the information that is provided by project owners is correct, clear and not deceptive, and
• use a foundation for client assets or a payment service provider for the payments from the investors to the project owner and back.

Finally, under the United States SEC rules, intermediaries are required to take steps to protect the privacy of information collected from investors; there are limits on affiliate marketing and intermediaries are required to develop and implement a written identity theft prevention program.

6. Monitoring and enforcement
IOSCO members were asked to identify the manner in which CF regulations are (or would be) enforced, what monitoring mechanisms are (or would be) in place and how sanctions and other enforcement actions are (or would be) implemented. The survey results revealed a few interesting points.

The Hong Kong SFC has set up a cross-divisional workgroup to monitor and review individual CF funding portals that come to the SFC’s attention, apply the relevant regulatory requirements to such funding portals, as well as to take regulatory action where appropriate.

The United Kingdom undertook a review of the securities-based CF market towards the end of 2014, following the implementation of new rules. The review found the CF market to be growing rapidly, but concluded that there was no need to change the United Kingdom’s current regulatory approach. The UK FCA will conduct a more detailed review in 2016, unless a perceived market failure triggers earlier intervention.

In Japan, the specific framework includes CF funding portals in the ongoing monitoring activities performed by the Japan FSA, including off-site monitoring and on-site inspection. Enforcement is carried out by the Japan FSA through administrative sanctions, such as orders for business suspension and issuance of business improvement orders.

In Italy, Consob is responsible for monitoring compliance with securities CF related provisions. Supervision is carried out on an ongoing basis. Consob may request the communication of data and information and the transmission of documents, and may also carry out on-site inspections. Consob sanctions violations through pecuniary fines and other administrative measures,
including prohibition on a precautionary basis to carry out CF related activities and suspension from the CF register.

France stands out among the jurisdictions that have established a new specific oversight framework. CIP associations will determine written admission and disciplinary procedures applicable to their members. The associations will perform on-site inspections of each of their members at least once every three years and will be authorized/supervised by the AMF.
III. CONCLUSION

With this survey, IOSCO has enhanced its understanding of developments in members’ current and/or proposed CF regulatory frameworks in various jurisdictions.

Jurisdictions use a variety of approaches to regulate CF. Among other things, some jurisdictions apply their general securities regulatory framework which often allows the use of certain built-in flexibilities, while others have either introduced (or have proposed to introduce) ad hoc regulatory CF regimes. While these measures are quite diverse and tailored to specific regulatory and market concerns, they do present some high level similarities.

One major commonality is the objective of achieving a balance between risks/investor protection related concerns and the positive role securities markets can play in supporting economic recovery and growth through the promotion of CF. It is clear, however, that the particular way this balance is shaped varies from one jurisdiction to another.

Another commonality that emerged from the review is that restrictions may apply to cross-border CF fundraising. For instance, special CF regimes often provide that the issuer and/or the managers running the funding portal must be incorporated locally.

The survey responses reveal that, despite certain commonalities and divergences in various jurisdictions, and the potential risks and positive rewards, CF regimes are in their infancy (or have not yet been launched) in most jurisdictions surveyed.

Accordingly, this Report does not propose a common international approach to the oversight or supervision of on-going or proposed programs. As this new sphere of activity continues to develop, IOSCO may consider whether it is appropriate to evaluate the effects of the different approaches and may assess whether any further work is needed.

</table>
|                |                                          | Retail investors enjoy a cooling off period of 7 days, a rescission right in the event of a material change in the offer and tag-along rights in the event of a change in the issuer’s control. | Investors enjoy a regime similar to cooling off period of 8 days. | No, the intermediaries provide the information such as important risk warnings available to investors online. | N/A                                                                                   | N/A                                                                                   | Right to cancel their investment commitment prior to the end of the subscription period. Yes, for one year. | No, but CF platforms shall ask accredited investors to declare in writing that they are aware of the greater risks and lower protection arising from them being considered accredited investors. | No, but CF platforms shall ask accredited investors to declare in writing that they are aware of the greater risks and lower protection arising from them being considered accredited investors. | No, but CF platforms shall ask accredited investors to declare in writing that they are aware of the greater risks and lower protection arising from them being considered accredited investors. | N/A

Italy: No caps on retail investors, but at least 5% of the offered shares shall be subscribed by professional investors, banking foundations or start-up incubator.

Japan: 500,000 yen in a single issuer per year by an investor + 100 mln yen per year in an issuer by all investors in total.

Korea (proposed): 200% of the investor’s annual income or property ownership-a cap of KRW2 mln per issuer and a cap of KRW10 mln for a 12 month period (no caps for sophisticated investors).

Mexico: Exclusively institutional and qualified investors or, in the case of equity securities, less than 100 people. Otherwise, Securities Market Law should be fully applied to issuers.

The Netherlands: Although there is no special law regime devoted to-equity CF, still the AMF uses its discretionary powers to impose requirements on CF platforms when granting a licence. Retail investment limits for equity/debt CF is € 20,000 per platform.

Pakistan: No restrictions, but general securities law apply.

Singapore: No restrictions, but general securities law apply.

Spain: € 3,000 per offering or € 10,000 per year per funding portal for non-accredited investors.

Turkey: No, but CF platforms shall ask accredited investors to declare in writing that they are aware of the greater risks and lower protection arising from them being considered accredited investors.

United Kingdom: A statement is signed by certified sophisticated investors, certified high-net worth investors and restricted investors – who are not receiving advice – before they can see promotions for the investments.

United States: If either annual income or net worth is less than US$100,000, then there is a limit of the greater of US$2,000 or 5% of the lower of annual income or net worth. If both annual income and net worth are equal to or greater than US$100,000, then a limit of 10% of the lower of annual income or net worth, but not to exceed US$100,000.

Unconditional right to cancel an investment commitment for any reason until 48 hours prior to the deadline identified in the offering docs. Thereafter, cancellation is possible in the event of a material change to the offering.

Yes, for one year unless the transfer is to the issuer, an accredited investor, or a family member, or the transfer is part of an SEC registered offering.

Intermediaries shall obtain a representation that the investor has reviewed the educational materials.

Intermediaries shall obtain by investors consent to electronic delivery, a questionnaire completed by the investor demonstrating his understanding of risks and a representation that the investor has reviewed the educational materials.
