## **Call for nominations**

### **Appointment as Academic Subject Matter Expert to the Derivatives Assessment Team**

The Financial Stability Board (FSB), the Basel Committee on Banking Supervision (BCBS), Committee on Payments and Market Infrastructures (CPMI) and International Organization of Securities Commissions (IOSCO) have agreed to undertake an evaluation of the impact of the interaction of reforms on incentives to centrally clear over-the-counter (OTC) derivatives. Over 2017-18, the Derivatives Assessment Team (DAT) will undertake a review of the incentives for central clearing arising from the interaction of a number of post-crisis regulatory reforms (see attached background note for more information on the study). A previous study was published in 2014.<sup>1</sup>

This DAT study is proposed to be carried out under the FSB's framework for post-implementation evaluation of effects of the G20 financial regulatory reforms ("evaluation framework").<sup>2</sup> The study began in July 2017 and the final report will be completed in late 2018.

The FSB seeks to appoint two academic subject matter experts to work with the DAT at interim stages of the study from September 2017 through to its completion in late 2018. These two experts would provide feedback on the methodological approaches, empirical analysis and preliminary findings to validate the study's quality and objectivity.

The academics selected to provide feedback to the DAT should have demonstrated technical knowledge and expertise, including a strong publication record, in some or all of the following areas:

- International prudential standards for financial institutions, particularly bank capital, leverage, liquidity and margining requirements and central counterparty (CCP) policy;
- Financial institutions and markets, particularly OTC derivatives markets;
- CCPs margin practices and the methodology for sizing their financial resources;
- Business practices of those providing OTC derivatives clearing services; and
- Empirical analysis/financial econometrics.

The FSB will review applications and select two academics in September.

Nominations (expressions of interest and a CV) should be submitted to the FSB at [fsb@fsb.org](mailto:fsb@fsb.org) by **1 September** with "Academic Subject Matter Expert" in the subject line. For more information, please contact [Tara.Rice@fsb.org](mailto:Tara.Rice@fsb.org).

## **Review of incentives to clear OTC derivatives centrally**

### **An evaluation of the post-implementation effects of reforms**

The FSB and the other standard-setting bodies have agreed<sup>1</sup> to undertake an evaluation of the impact of G20 reforms on incentives to clear over-the-counter (OTC) derivatives centrally. This study to be undertaken by the Derivatives Assessment Team (DAT) will review the interaction of reforms affecting incentives for clearing. It will be carried out under the new FSB framework for post-implementation evaluation of effects of the G20 financial regulatory reforms (evaluation framework).<sup>2</sup> The final report will be completed in late 2018. The study follows an earlier review of the topic published in 2014.<sup>3</sup>

It is an appropriate time to re-examine whether adequate incentives to clear centrally are in place. Central clearing of standardised OTC derivatives was a key pillar of the G20 Leaders' commitments to reform OTC derivatives markets in response to the financial crisis. The key reforms relevant to incentives for central clearing have now been agreed and are being implemented. Central clearing rates have increased markedly since 2009, notably in interest rate derivatives and credit derivatives.<sup>4</sup>

However, concerns have been raised by some that the interaction of some post-crisis reforms may have contributed to inadequate incentives to clear centrally or may otherwise affect costs associated with providing clearing services or with accessing central clearing for some market participants, in ways that do not support the G20 Leaders' commitments. It would also be useful to understand how these incentives affect broader market functioning.

A number of post-crisis reforms have, or are expected to have, an impact on the incentives of market participants (including dealers and end users) to clear OTC derivatives through CCPs. Such reforms include:

- BCBS-IOSCO margin requirements for non-centrally cleared derivatives
- CPMI-IOSCO Principles for Financial Market Infrastructures
- Basel III framework aspects (including interim and final requirements for bank exposures to CCPs and to non-centrally cleared derivatives, Leverage Ratio and Liquidity Coverage Ratio)

Importantly, other national and regional policy differences, including exemptions and accounting and netting rules, may also affect the incentives to centrally clear.

The DAT study seeks to deliver a comprehensive assessment of whether the reforms are incentivising central clearing consistently with the G20 reform objectives across different asset classes/product types and for various classes of counterparty. It would also seek to take into account national and regional policy measures where these may be material to the overall structure of incentives. The DAT study's evaluation of the interaction of reforms will help inform any subsequent policy recommendations, bearing in mind the financial stability objectives of the reforms.

The assessment will be carried out by a specially constituted working group of approximately 25 representatives from a range of member authorities of the relevant standard-setting bodies. This working group will be responsible for developing the framework, consulting with industry representatives, conducting the analysis, writing the report and proposing any recommendations.
